Mr. Hamlin, we have not made contact for a while so I thought I'd check in.

I have been talking with the other scientist on this project and we would like to sample one of the towns wells that we have sampled in the past Phase I and II data collection efforts and begin using that well as a background groundwater monitoring site for the project. In addition, continuing to monitor one of the Town of Pavillion's municipal wells would also provide you with additional information regarding the quality of the raw water for your municipal system.

I cannot promise that we would be able to sample your well each time we are in the field but if we identify a municipal well as our background well we would certainly make it a priority to do so.

If you agree that this would be a benefit to the town of Pavillion and it certainly would provide EPA with a good representative background sampling sites, we would like to sample one of the wells the week of April 16th.

To be clear this would not change the town's responsibility to continue with the required compliance monitoring as a PWS and the sampling would be to monitor the raw water in put to the system a well prior to any treatment.

Please give me a call and we can discuss if you are interested and which well would be preferable to select.
